**Professor Ioannis V. Yentekakis** has born in 1960 in Crete, Greece. He graduated in 1983 from the Department of Chemical Engineering, **University of Patras**, where in 1983-1987 he elaborated his Ph.D. under the supervision of Professor C.G. Vayenas. In 1987-1888 he was employed as postdoctoral fellow in the Department of Chemical Engineering at **Princeton University, NJ, USA**. In 1988 he returned to Greece, joined the ICE-HT/FORTH in Patras and the department of Chemical Engineering, University of Patras as a postdoctoral fellow and lecturer in both institutions. In 1995-2001 he served as Faculty Member (Lecturer and Assistant Professor) in the field of "Catalytic and Electrocatalytic Processes" in the department of Chemical Engineering, University of Patras. Then, in 2001 he was elected as Associate Professor in the Technical University of Crete (TUC) in the field of "Physical Chemistry" and in 2006 as Full Professor in the same field and University. In 2013 he moved to the School of Environmental Engineering of TUC, where he is working up to today. For many years (1989-today), he sustains very close collaboration (frequent visits as Visiting Professor) with the department of Chemistry, **Cambridge University, UK** (Prof. R.M. Lambert).

Prof. Yentekakis work is related with extended teaching (>110 under- and post-graduate semester courses of several titles), administrative responsibilities (e.g., Chairman, University Senate and University Council regular member) and research activities. His research activities lie mainly in the scientific areas of **Heterogeneous Catalysis and Electrocatalysis; Physical Chemistry of Surface and Interfaces; Chemical Kinetics, Materials Technology and Engineering; Reactors and Processes Engineering, Renewable Energy, etc.** In particular, his research interests and objectives are to discover, elucidate, understand and exploit surface, catalytic, electrocatalytic and promotional phenomena over complex composites and nano-structured materials. It involves determination of the electronic structure of adsorbed and reacting surface species as a function of reaction variables, especially in relation to reactivity/selectivity and molecular mechanisms, heterogeneous catalysis, environmental protection, etc. Aspects addressed in his projects, quite often have direct and immediate relevance to important technological applications. Current research includes investigation of surface-induced and support-mediated promotional effects and their synergy in heterogeneous catalysis/electrocatalysis; De-NOx and De-N<sub>2</sub>O processes; natural gas, biogas and higher hydrocarbons reforming processes, emissions control systems, fuel cells. Surface and catalytic phenomena are studied by advanced analytical, microscopic and spectroscopic methods such as high resolution electron microscopy (HREM), in situ Diffuse Reflectance Infrared Fourier Transform Spectroscopy (DRIFTS), X-ray photoelectron spectroscopy (XPS) X-ray diffraction (XRD), X-ray fluorescence (XRF), Physi-Chemi-sorption, Temperature-Programmed Desorption (TPD) and other techniques.
